

# Eclipse MicroPen® Microneedling

Eclipse MicroPen treats age spots, blackheads, hyperpigmentation (melasma), acne spots and scars, fine lines and wrinkles and improves the appearance of dull, “tired-looking” skin. It can be used on the face, neck, chest, arms, hands, legs, abdomen and neck.

Recommended to have 2-4 treatments with platelet rich plasma (PRP).

## ***Blood-Derived Growth Factors***

The internal essence of your blood contains life-giving fundamental protein growth factors. PRP utilizes a leading-edge, patented technology that is specifically designed. With a simple, quick and advantageous process, your PRP professional is able to derive a high concentration of biological nutrient-rich cells and create autologous platelet-rich plasma.

- The practitioner draws an amount of blood
- The practitioner places the blood into a centrifuge and spins the blood at a very rapid rate to separate the platelets from the other components of the blood.
- The platelet-rich plasma is activated to release at least eight essential growth factors and signaling proteins. Platelet-rich plasma is a technology that deploys aspects of blood-based biochemistry. All constituents retrieved in PRP are exclusively from the patient (autologous in origin). Nevertheless, before any treatment, disclose all the medications you are taking (including herbs) to your doctor.
